

NSR-500

Network Surveillance Recording Server

SONY
make.believe

The NSR-500 is Sony's 16-channel full-HD network surveillance recording server delivering an excellent cost-performance ratio.

Six models with different storage capacities are available, so you can select according to your precise requirements.

FEATURES

■ Long-duration Recording

With a 12 TB HDD (2 TB x 6), you can record more than 300 hours of high-quality full-HD images compressed at 4 Mbps with a frame rate of 30 fps.

■ RAID Technology to Prevent Disk-failure Data Loss

The hard disk storage units of the NSR-500 are configured with high redundancy. They feature RAID implementations and hotswappable capabilities to protect important data against hard disk failure, 24 hours a day. You can choose from RAID 1 (1+0), RAID 5 or RAID 5 + Hot Spare, depending on your system requirements.

■ Optional Licenses for Future System Expansion

The optional NSBK-CL05 allows you to add extra licenses, and you can connect up to 24 network cameras to a single NSR-500 (including the original 16 cameras).

■ Easy Setup and Easy Operation

The NSR-500 detects Sony's network cameras in a network and sets up all the parameters of each camera in a step-by-step manner with a dedicated setup wizard. This drastically reduces the time required for system installation. Images from cameras are assigned automatically to a monitor layout menu, so that you can start monitoring instantly.

■ Backward System Compatibility

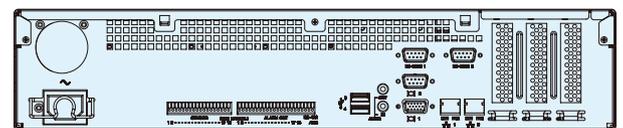

The NSR-500 can be used with Sony's existing recording systems such as the NSR-1000 Series, and RealShot Manager Advanced, through the RealShot Manager Advanced client, whose software can be downloaded from the NSR-500.
