INTEGRATED POSITIONING UNITS

More than a PTZ, more than a speed dome. The all-in-one ULISSE systems integrate a high speed 360° rotating P&T head with a camera housing and a multiprotocol telemetry receiver and are really easy to install and configure. All units are guaranteed IP66 weatherproof. To respond to all application needs, different models have been developed in compact, medium and maxi sizes: with choice of analog or IP control mode, with built-in camera, IR illuminators option, absolute positioning sensors. The selection offers units suitable for Network cameras and thermal cameras. The ULISSE is a truly innovative, versatile, widely appealing product ideal for use in any application for outdoor dynamic video surveillance.

IIB		Ethylene				
IIC	Hydrogen	Acetylene			Carbon disulphide	

¹ Normally it refers to the maximum ambient temperature of the installation. The lowest ignition temperature of the explosive atmosphere must be higher than the maximum surface temperature of the housing. The lower is the temperature class, the better it is.

² A higher temperature class automatically covers a lower one (T6 is better than T1). In addition; IIB also covers IIA; IIC also covers IIB and IIA.

STAINLESS STEEL SYSTEMS

The stainless steel housings and P&T's have been designed to protect the cameras from particularly aggressive environmental conditions. They are entirely constructed from AISI 316 stainless steel. In consideration of the extremely severe specifications, each detail has been carefully analysed, which obtains very reliable products, suitable for industrial uses. The selection offers a choice of models to work specifically with thermal imaging cameras, utilising Germanium glass and other high-quality substances, the glass becomes invisible to the thermal imaging cameras.

HOUSING ACCESSORIES

SUNSHIELD

Protection against solar rays and the increase of the housing's internal temperature. Highly recommended for outdoor installations.

FAN ASSISTED HEATER

The fan allows for forced air circulation and homogeneous temperature inside the housing. Available for VERSO, VERSO COMPACT and HOV housings.

HEATER

Circuit made up of a thermostatically controlled 20W or 40W heating element PTC Ton $\leq 15^{\circ}\text{C}$ (59°F); Toff $\geq 22^{\circ}\text{C}$ (71°F). It is available in 12Vdc/24Vac voltage or 115/230Vac voltage.

REINFORCED HEATING

Circuit made up of a thermostatically controlled double PTC or triple fan-assisted PTC for installations where external temperatures are very rigorous. Operating temperatures: down to -40°C (-40°F), for the double heater, down to -50°C (-58°F), for the triple fan-assisted heater. For HEG housing.

CAMERA POWER SUPPLY

Camera feeding circuit, which can be installed inside the housing, available in different versions: 115/230Vac input and 24Vac/12Vdc output.

BLOWER

Blowing circuit with a thermostatically controlled cooling blower (Ton $\geq 35^{\circ}\text{C}$, 95°F; Toff $\leq 20^{\circ}\text{C}$, 68°F) and air filter. It is available in 12Vdc, 24Vac and 230Vac versions, pre-installed in the housing or as optional kit.

KEY FEATURES

▪ **ASSISTED NAVIGATION**

Proposes alternative live views of the event, to provide more perspectives and a better view.

▪ **FOCUS ON THE ALARMED AREA**

When a unit detects an event it will send a priority message to the other units. At this point, all the available units will swiftly focus their cameras on the alarmed area.

▪ **AUTOMATIC RECORDING**

The adjacent cameras will automatically record a number of films of the same event, providing alternative images from a variety of perspectives.

▪ **REDUNDANT SYSTEM**

If any unit is tampered with, the adjacent cameras will cover the area of the redundant unit until it has been repaired.

▪ **INTELLIGENT PATROLLING**

The units cooperate to achieve optimal cover of the areas, reducing the superimposing of cameras during patrolling.

¹ Meaning control by DCT, DCJ and DCK keyboards through serial port RS485 of matrix SM series. Because DCK, DCJ and DCT may be interfaced with equipment not manufactured by Videotec, the possibility exists that the interface protocols have changed or are in a different configuration from earlier tested units from us. Videotec recommends a bench test prior to installation. Videotec will not be liable for any installation costs or lost revenues in the event a compatibility problem.

VIDEO TRANSMISSION

The twisted pair video transmitter/receiver system is an interesting solution for all those installations where the distance that the video signal must cover via cable is very long. This is the right alternative to fiber optic systems for distances below 1500m (4900ft). The receiver is available with weatherproof box or Euro-card.
